Creativity shapes your

# BOTTOM LINE

## Pediatrics: It's Personal

Our experiences with our own kids — spending countless days in hospitals waiting and worrying — is the inspiration that fuels our drive to innovate. It's all about the kids.

More than 10 million square feet of care spaces within the past decade. From China to Australia and the Middle East, California to Philadelphia and Canada to Texas, it's not just a project. It's personal. Our focus is supporting your mission of improving the health and well-being of families. There is nothing more rewarding!

## Demand the Impossible!

Yes, it is possible to transform without expanding. And, Transforming business by design<sup>®</sup> pays. Finding ways to optimize your business through operations without unnecessary building is the way of FKP Advisors.

Our health care operational experts save clients millions. Alternative scenario modeling and analysis have saved clients as much as \$8 million on a single project. FKP mixes good old-fashioned brain power together with the latest technology for exceptional payoff.

### Cook Children's Medical Center's

new North Tower, including its all-private state-of-the-art NICU, will open in Fall 2011. The new NICU increases capacity **100%** to serve the families of North Texas.

*"The new NICU at Cook Children's is truly state-of-the-art. . . Every aspect of its design and function was carefully planned to create the ideal environment for staff, families and patients. It will enrich the lives of countless patients and their families for many years."*

**David Riley, MD, FAAP**  
Neonatologist

With a vision to create the ideal care experience, the **Nemours/Alfred I. duPont Hospital for Children** Delaware Expansion Project will offer private patient accommodations with articulated care giver, personal and family space. Areas are grouped into "neighborhoods" that maximize patient contact with care givers by placing medical resources close at hand. Opening to patients in 2014.

## The Business Case for Design

FKP has won our share of design awards — hundreds in fact. But our pediatric projects win more than beauty contests; they transform business, push the envelope and change the way people work and heal. Across the world, these shining examples of collaboration and efficiency are measured by their results. They've garnered such coveted honors as *Business Week's* "Good Design is Good Business" and *R&D Magazine's* International Laboratory of the Year, and offer proof that well measured design has impact on your **BOTTOM LINE**.

**Nationwide Children's Hospital**  
Columbus, Ohio

The 30-bed, all-private PICU at **Children's Hospital of Orange County** is a consecutive recipient of the AACN Beacon Award for Critical Care Excellence. This was the **1<sup>ST</sup>** pediatric unit to be recognized with this honor.

Without significant architectural changes, FKP developed process improvements at **Arkansas Children's Hospital** that have saved **\$3 MILLION**. Innovations such as the KID CARD and patient dashboard have made the facility a recognized model for ambulatory excellence.

**Texas Children's Hospital Feigin Center**  
Houston, Texas

## Renovation: The Fine Art of Balance

Why renovate? The hospital is losing market share. Patient safety, infection control and quality measurements are impacted because of aging facilities. Competing facilities are making yours look old and tired. It needs a face lift or, perhaps, major surgery.

The experience of knowing how, when and where to get the most value for your money can create significant increases in revenue for "economically-challenged" children's hospitals and research facilities.

China's JH Lanecare repurposed two retail buildings to expand their 3P hospital system in a rapidly growing Beijing neighborhood. **New Century International Women's and Children's Hospital** offers patients and doctors a more Western experience than traditional Chinese hospitals.

## Nirvana — Never Settle for Less

Rising demands for computer capacity, redundant power, availability, security and capital leave hospitals looking towards the cloud — figuratively and literally. Technology drives investments today. It's expensive and must be managed smartly.

Our equipment planning teams are more than list makers: they're investment managers. At every step — from planning and specification, cost analyses, purchasing and facility activation — knowledge rich managers support your equipment program. We ensure installation is as fast, efficient and state-of-the-art as possible.

In a world that too easily settles for less, FKP believes that it's worthy work to envision, believe in and fight for greatness. That's the work we do alongside our clients every day.

# More than 10 million square feet of pediatric care environments in the last decade — and millions more over our 75-year history.

## Planning to Succeed

Creating a successful master plan starts well before a discussion of where to place things within the building. It starts with a determination of what should go into the building. Strong master plans successfully integrate economic, social and environmental objectives.

FKP master plans enable clients to make strategic data-driven decisions for their future.

For the first time, **Le Bonheur Children's Hospital** ranked among *U.S. News & World Report's* 2011 Best Children's Hospitals. Opened in 2010, their replacement hospital expanded the capabilities of their specialties including **TOP RANKED** neurology and neurosurgery, orthopedics, nephrology, and cardiology and heart surgery.

Previously sharing services with an adult hospital, the new inpatient tower at **Children's Hospital of Orange County** transforms the institution into a best-in-class freestanding children's hospital. The facility will incorporate more than **500** safety enhancements — from same-handed patient rooms to cutting-edge information systems and care processes — designed to achieve the safest, most advanced pediatric care.

**Texas Children's Hospital** was the first hospital to win *Business Week's* "Good Design is Good Business" award. FKP's design of TCH's Clinical Care Center increased exam room utilization from 41% to 60%. Their patient registration time of under 15 minutes increased from **69% to 94%**.

### FKP Architects

Visionaries who give form to facilities supporting the business of health care.

### FKP Advisors

Expert strategies and insight for optimizing health care operations.

### FKP Interiors

Combining the physical and technological worlds to create distinctive branded environments.

### Equipment Collaborative

Specialists in integrating sophisticated equipment and technologies for health organizations.

Founded as The Klein Partnership in 1937, today's FKP Architects delivers more than architecture in the health care, research and academic market sectors. The firm engages its promise of Transforming business by design® across all core services of architecture, operational consulting, interiors, and equipment. FKP works with top-tier pediatric institutions making a difference in the health of all people throughout the world.
